PROFESSIONAL SUMMARY

Frontend Software Developer with 3 years of experience building enterprise Angular (v11–v19) applications for global logistics platforms processing millions of freight movements annually. Deployed real-time MapBox shipment tracking across 50+ countries, led a full Angular migration (v11 → v19) that eliminated ~30% of framework bugs, and unified 3 shared component libraries — shortening cross-team feature-delivery cycles by ~25%. Consistent track record of measurable UI performance improvements, clean component-driven architecture, and on-time shipping in Agile environments, with strong communication skills and experience in building responsive and cross-browser compatible UI.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, SQL

Frontend: Angular 11–19, HTML5, CSS3, RxJS, NgRx (basic), PrimeNG, Bootstrap, MapBox, Canvas API

Architecture & Design: Component-Based Architecture, Modular Frontend Development, Responsive & Cross-Browser Design

Cloud: AWS (EC2, S3, Lambda), Azure — deployment & environment configuration

Backend & APIs: Spring Boot, RESTful APIs, Postman, API Integration

Tools & DevOps: Git, GitHub, Docker, CI/CD Pipelines (GitHub Actions), SonarQube, MS Office

Methodologies: Agile (Scrum), Component-Driven Development, Code Reviews

PROFESSIONAL EXPERIENCE

Software Developer — Cozentus Technologies, Bhubaneswar, India

Jul 2023 –Present

- Architected Angular (v11–v19) applications with lazy loading, modular design, and strict TypeScript — reducing average page-load time by ~35% and cutting new-developer onboarding time by 2 weeks.
- Executed a phased framework upgrade (v11 → v16 → v19), resolving ~30% of recurring framework-related defects and aligning the codebase with current Angular LTS standards.
- Consolidated 3 separate shared component libraries into a unified system, eliminating ~30% of duplicate code and accelerating feature-delivery cycles by ~25% across teams.
- Established a Postman-based REST API validation workflow for Spring Boot integrations, reducing QA defects by ~40% per sprint.
- Built live shipment-tracking views using MapBox — including delay alerts and a 10-minute predictive ETA engine — improving operational responsiveness for 50+ global supply-chain users.
- Leveraged public cloud platforms (AWS S3, EC2; Azure App Service) for hosting and deployment of frontend builds, reducing manual release overhead and improving environment consistency.
- Configured and maintained CI/CD pipelines using GitHub Actions and Docker to automate build, test, and deployment workflows — cutting release cycle time and improving deployment reliability.
- Collaborated with backend engineers, QA analysts, product owners, and business stakeholders across 3 Agile squads to release production logistics features on schedule.

PROJECTS

Smart Navigator — Lead Frontend Developer | [navigator.bdpsmart.com](#)

Angular · TypeScript · Java · Spring Boot · MapBox · Docker · AWS · SQL

- Engineered and shipped an end-to-end digital freight platform providing live shipment visibility across 50+ countries and 30+ major ports.
- Integrated MapBox-based tracking with a 10-minute predictive ETA engine, reducing inbound status enquiries by ~20%.
- Implemented real-time alerts for shipment delays, port congestion, and route exceptions — improving operations response

time by ~25%.

- Deployed application builds to AWS S3 and EC2 via Docker-based CI/CD pipelines, ensuring consistent releases across environments.
- Crafted analytics dashboards for routing and scheduling performance, enabling freight forwarders to reduce inventory-risk exposure.

Detention & Demurrage (D&D) Management Platform — Frontend Developer |

dndtest.bdpSMART.com Angular · Java · Spring Boot · MapBox · Canvas API · Docker · Azure · SQL

- Contributed to PSA BDP Smart Suite, a proprietary platform monitoring D&D; charges for 10,000+ containers daily. • Designed fee-forecasting and risk-assessment modules that reduced unnecessary D&D; charges by ~15% for global shippers.
- Configured Azure App Service deployments with Docker containers, streamlining the release process and maintaining consistent cloud environments.
- Produced dynamic reporting interfaces enabling proactive container-movement decisions, directly reducing financial exposure across key trade lanes.

EDUCATION

B.Tech in Computer Science Engineering

Parala Maharaj Engineering College, Berhampur, India | 2019 – 2023 | CGPA: 9.1 / 10.0

CERTIFICATIONS

Foundations of Coding – Full Stack Developer — Microsoft | 2025

Introduction to Front-End Development — Meta | 2025

GenAI for Front-End Developers - Google cloud |2026
