PROFESSIONAL SUMMARY

Results-driven Frontend & Full-Stack Software Developer with 3.5+ years of experience designing and scaling high-performance enterprise web applications for global logistics platforms. Expert in Angular (v11-19), TypeScript, RxJS, Spring Boot, and REST API integration, with deep experience in cloud deployments across AWS and Azure. Proven track record of architectural ownership, reducing page load latency by 35%, cutting QA defects by 40%, and driving product innovation through modern microservices and AI-driven automation.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript (ES6+), Python, HTML5, CSS3, Java, SQL
- **Frontend:** Angular (v11-19), RxJS, NgRx, PrimeNG, Bootstrap, MapBox, Canvas API, Angular Material, Single Page Applications (SPA)
- **Architecture & Design:** Component-Based Architecture, Modular Frontend Development, Responsive & Cross-Browser Design, MVC Architecture
- **Cloud:** AWS (EC2, S3, Lambda), Azure
- **Backend & APIs:** Spring Boot, Node.js, RESTful APIs, Microservices, Postman, API Integration
- **AI Coding Tools:** GitHub Copilot, ChatGPT, Node.js development acceleration, automated debugging, prompt engineering workflows
- **Testing & Quality Assurance:** JUnit, TestNG, Unit & Integration Testing, SonarQube
- **Tools & DevOps:** Git, GitHub, Docker, CI/CD Pipelines (GitHub Actions), npm, Webpack
- **Methodologies & Tracking:** Agile (Scrum), Jira, Azure Boards, Component-Driven Development, Code Reviews, Technical Mentorship

PROFESSIONAL EXPERIENCE

Cozentus Technologies | Software Developer | Bhubaneswar, India | Jul 2023 - Present

- Spearheaded frontend architectural ownership for enterprise Angular (v11-v19) single-page applications, leveraging lazy loading and modular design to cut page load times by 35% and accelerate developer onboarding by 2 weeks.
- Executed a phased framework upgrade (v11 to v16 to v19), resolving 30% of recurring framework-related defects and aligning codebases with modern Angular LTS standards.
- Consolidated 3 separate shared component libraries into a unified system using Angular Material, eliminating 30% of duplicate code and accelerating feature delivery cycles by 25%.
- Championed Test-Driven Development (TDD) and established Postman and Spring Boot REST API integration testing standards, reducing sprint QA defects by 40%.
- Built live shipment-tracking views using MapBox with delay alerts and a 10-minute predictive ETA engine, improving operational responsiveness for 50+ global supply-chain users.
- Deployed frontend builds to public cloud platforms (AWS S3, EC2; Azure App Service), reducing manual release overhead and improving environment consistency.
- Configured npm and Webpack workflows in CI/CD pipelines using GitHub Actions and Docker to automate build, test, and deployment operations.
- Collaborated across 3 Agile squads with backend engineers, QA analysts, product owners, and stakeholders to deliver core logistics features on schedule.
- Mentored junior developers on best coding practices, component-driven design, and Agile workflows, fostering high-performing team standards.

PROJECTS

Smart Navigator | navigator.bdpsmart.com

- Engineered and shipped an end-to-end digital freight platform providing live shipment visibility across 50+ countries and 30+ major ports.
- Integrated MapBox tracking with a 10-minute predictive ETA engine, reducing inbound status enquiries by 20%.
- Implemented real-time alerts for shipment delays, port congestion, and route exceptions, improving operations response time by 25%.
- Deployed application builds to AWS S3 and EC2 using Docker-based CI/CD pipelines to ensure continuous delivery.
- Developed and integrated a Node.js microservice for real-time shipment notifications, optimizing event-driven data flows and reducing status latency by 15%.
- Crafted analytics dashboards for routing and scheduling performance, enabling freight forwarders to minimize inventory risk.

Detention & Demurrage (D&D) Management Platform | dndtest.bdpsmart.com

- Contributed to PSA BDP Smart Suite, monitoring D&D charges for over 10,000 containers daily.
- Designed fee-forecasting and risk-assessment modules that reduced unnecessary D&D charges by 15% for global shippers.
- Configured Azure App Service deployments with Docker containers to streamline release workflows across cloud environments.
- Integrated an AI-driven predictive forecasting module using OpenAI API and LLMs to analyze charge patterns and support proactive logistics decisions.
- Produced dynamic reporting interfaces that enabled proactive container movement decisions and reduced financial risk across key trade lanes.

Patronus AI Support Investigator (Hackathon Proof of Concept) | Live Demo

- Built an AI-driven support investigation tool during a hackathon to automate incident diagnosis and response workflows.
- Integrated intelligent log analysis and automated root-cause detection to assist support engineers in resolving critical issues faster.
- **Technologies:** Angular, TypeScript, Python, Node.js, REST APIs, OpenAI API

EDUCATION

Parala Maharaja Engineering College | B.Tech in Computer Science & Engineering

Berhampur, India | 2019 - 2023 | GPA: 9.1 / 10.0

CERTIFICATIONS

- Foundations of Coding - Full Stack Developer: Microsoft | 2025
- Introduction to Front-End Development: Meta | 2025
- GenAI for Front-End Developers: Google Cloud | 2026
